

Vital Vending Sales — Website Redesign Brief

Context & Intent

This brief was written by the business owner (Nick) and organized for AI readability. All content reflects the owner's actual goals and preferences. Nothing has been removed or altered in substance. The intended use is to provide Claude Code with full context for planning and building the new Vital Vending Sales website.

Primary Strategic Objective

The website must be repositioned to lead with AI smart coolers and modern unattended retail solutions as the primary focus of the homepage and overall messaging. Smart coolers are a major business differentiator and should feel like the hero product throughout the site.

At the same time, traditional vending offerings must remain prominent and easy to find — new vending machines, used equipment, and related services should not be hidden or deprioritized.

The target outcome: A website that feels innovative and smart cooler-centric while still reinforcing that Vital Vending Sales is a trusted leader in the broader vending industry.

Owner note: "If you identify a significantly better approach to achieve these goals, I'm open to recommendations before implementation."

Scope of Work

1. Site Audit & Recommendations

- Review the current website at vitalvendingsales.com
- Provide recommendations for improvement before implementation begins

2. Site Structure & Navigation

- Update the overall site structure
- Redesign navigation to reflect the new strategic positioning (smart coolers first, traditional vending accessible)

3. Homepage & Key Pages

- Redesign the homepage with smart coolers as the hero
- Refresh key service pages

4. Mobile Experience

- Improve the mobile experience across all pages

5. SEO & Performance

- Complete initial SEO optimizations
- Complete initial website performance optimizations

6. Equipment Catalog (~25 Products)

Build a full equipment catalog covering AI smart coolers and new vending machines.

Each product listing must include:

- Product images
- SEO-friendly descriptions
- Pricing
- Product detail pages
- Lead capture functionality (e.g., "Request Information" or "Get a Quote" form)

Important constraint: The equipment catalog must not allow customers to purchase products online. Visitors should be guided into a lead generation and follow-up process managed by Vital Vending Sales.

7. Parts E-Commerce Store

Build the foundation for a parts online store with full e-commerce functionality.

Requirements:

- Full online checkout functionality (parts can be purchased directly, unlike equipment)
- Store structure that the internal VVS team can easily expand over time without developer help
- Create 1–2 sample parts listings to demonstrate the structure

- Backend configured so the team can independently manage:
 - Products
 - Pricing
 - Descriptions
 - Images
 - Inventory
 - Integration with eBay or similar multichannel sales platforms where appropriate, to support multichannel selling
-

Key Distinctions to Keep in Mind

Area	Purchase Online?	Goal
Equipment Catalog (smart coolers, vending machines)	 No	Lead generation — guide visitor to contact VVS
Parts Store	 Yes	Direct online purchase with full checkout

Owner's Voice (Preserved)

"The goal of this project is to modernize the Vital Vending Sales website and better position the company for future growth. While this scope outlines my expectations, I'm not trying to dictate every detail. If you identify a significantly better approach to achieve these goals, I'm open to recommendations before implementation."

"I want the site to lead with AI smart coolers and modern unattended retail solutions, making them the primary focus of the homepage and overall messaging. Smart coolers are a major differentiator for our business and should feel like the hero product."

"I do not want to undermine or hide our traditional vending offerings. New vending machines, used equipment, and related services should remain prominent and easy for customers to find."

EXAMPLE WEBSITES FROM COMPETITORS TO CAPTURE INSPIRATION

Nick Details VVS Website (ORIGINAL MESSAGE):

I used AI to organize this as is obvious but this is all informed by my own wants/desires, just communicated more like a robot would than I probably would:

Website Redesign:

The goal of this project is to modernize the Vital Vending Sales website and better position the company for future growth. While this scope outlines my expectations, I'm not trying to dictate every detail. **If you identify a significantly better approach to achieve these goals, I'm open to recommendations before implementation.**

One important strategic objective is the overall positioning of the website. I want the site to **lead with AI smart coolers and modern unattended retail solutions**, making them the primary focus of the homepage and overall messaging. Smart coolers are a major differentiator for our business and should feel like the hero product. At the same time, I do **not** want to undermine or hide our traditional vending offerings. New vending machines, used equipment, and related services should remain prominent and easy for customers to find. The ideal result is a website that feels innovative and smart cooler-centric while still reinforcing that Vital Vending Sales is a trusted leader in the vending industry.

Scope

- Review the current website and provide recommendations for improvement.
- Update the overall site structure and navigation.
- Redesign the homepage and refresh key service pages.
- Improve the mobile experience.
- Complete initial SEO and website performance optimizations.
- Build an equipment catalog for **approximately 25 products** (AI smart coolers and new vending machines), including:

Product images

SEO-friendly descriptions

Pricing

Product detail pages

Lead capture functionality such as "Request Information" or "Get a Quote"

- The equipment catalog should **not** allow customers to purchase products online. Instead, visitors should be guided into a lead generation and follow-up process managed by Vital Vending Sales.

- Build the **foundation for a parts e-commerce store**, including:

Full online checkout functionality

Store structure that our internal team can easily expand over time

Creation of 1–2 sample parts listings

Backend configured so we can independently add products, pricing, descriptions, images, and inventory

Integration with eBay or similar sales channels, where appropriate, to support multichannel selling
